TalentTrace AI - LangGraph Workflow Design

Four Bounded Stateful Workflows | PostgreSQL Checkpoints | Human-in-the-Loop

PLANNED WORKFLOW DESIGN - implementation not implied

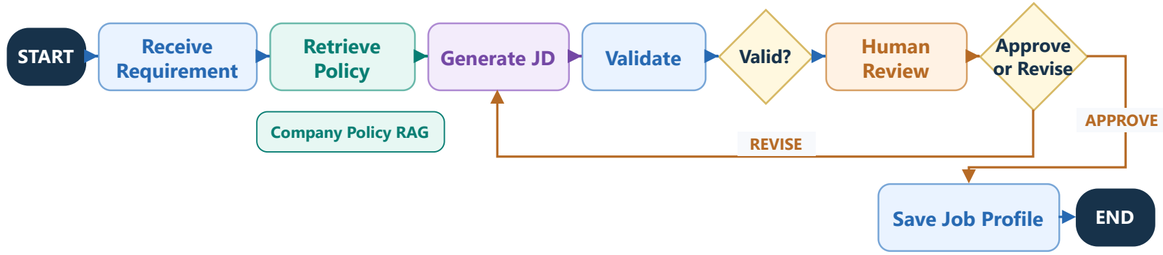

LEGEND: Service | LLM | Retrieval | Human | Checkpoint | Conditional

Inside FastAPI | No master graph

A Job Description Agent

MANDATORY HUMAN APPROVAL

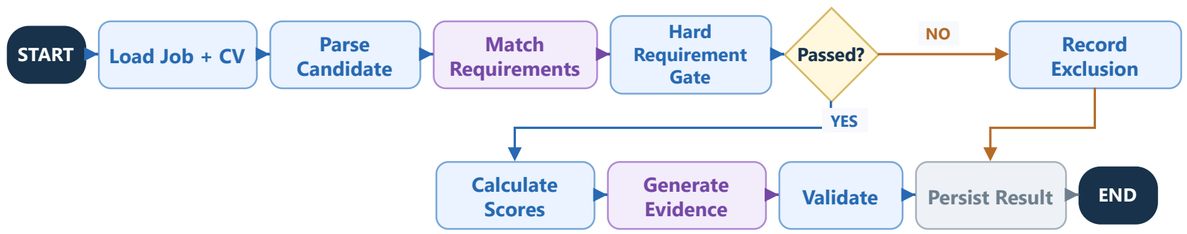

State: request • policy context • draft • validation • approval/revision

B Candidate Screening Agent

ONE EXECUTION PER CANDIDATE

State: candidate/job refs • profile • matches • scores • evidence • status

LLM: semantic match / evidence

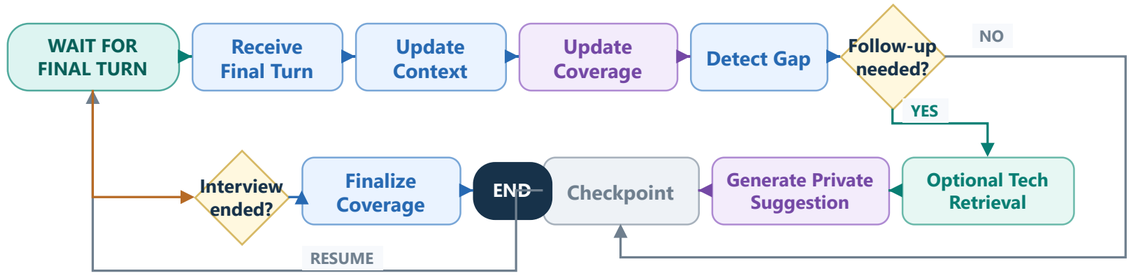

Deterministic: gate + scoring

Invalid result → bounded retry / human review

C Live Requirement Coverage Co-Pilot

ONE PERSISTENT INTERVIEW THREAD

State: session refs • requirements • recent turns • coverage • evidence • suggestions

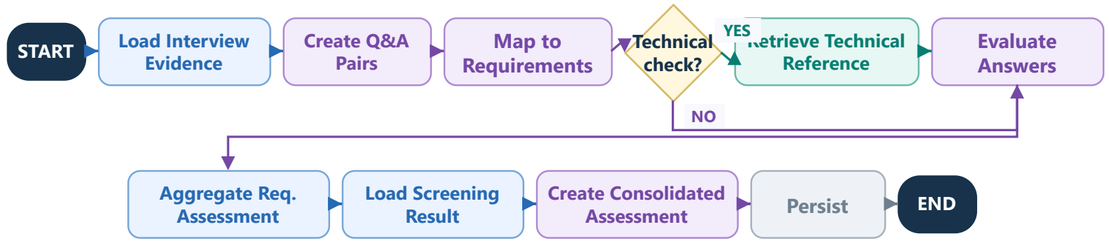

Final STT only • Same persistent thread • Private to interviewer

D Post-Interview Evaluation Agent

AFTER COMPLETED INTERVIEW

State: interview refs • Q&A • mappings • evaluations • assessment

Relevance • Accuracy • Completeness • Clarity

Validation failure → bounded retry / human review

PostgreSQL LangGraph Checkpointer

Resume / recovery state

Explicit State • Conditional Routing • Evidence Traceability • Human Control • Checkpointed Recovery
